

## TECHNICAL DATASHEET

# COOLEX A

### Typical properties :

Aspect solution in water		transparent blue
pH 2% solution		9,5
Viscosity at 40°C	cSt	125
Dilution ratio		5% refracto meter (°Brix) x 1,66 = %conc.
Corrosion test		pass
% Cl		0
% Nitrite		0

### General information:

Coolex A is a bio stable, di-ethanolamine free emulsifying half-synthetic metalworking fluid, which forms in water a transparent micro-emulsion. Because of its combined cooling- and lubricating properties, COOLEX A gives excellent results on all chip removal operations as turning, milling and drilling. COOLEX A is suitable for use on ferro and non-ferro, stainless steel alloys, cast iron and aluminium.
